

1. Grade Evaluation System

```
public class StudentGrade{
    public static void main(String[] args){
        int Math = 80;
        int Science = 85;
        int History = 90;

        int average = (Math + Science + History) / 3;

        if(average >= 90){
            System.out.println("Grade A");

        }else if(average <= 89 && average >= 70){

            System.out.println("Grade B");
        }else if(average <= 69 && average >= 50){

            System.out.println("Grade D");
        }else if(average <= 49 && average >= 30){

            System.out.println("Grade D");
        }else{

            System.out.println("Fail");
        }

    }
}
```

2. Leap Year

```
public class LeapYear {  
    public static void main(String[] args) {  
  
        int year = 2004;  
  
        if (year % 4 == 0 && year % 100 != 0 || year % 400 == 0) {  
            System.out.println(year + " is Leap Year");  
        } else {  
            System.out.println(year + " is not Leap Year");  
        }  
    }  
}
```

3. Days of the Week

```
public class DaysOfTheWeek {  
    public static void main(String[] args) {  
        int day = 3;  
  
        switch (day) {  
            case 1:  
                System.out.println("Monday");  
                break;  
  
            case 2:  
                System.out.println("Tuesday");  
                break;  
  
            case 3:  
                System.out.println("Wednesday");  
                break;  
  
            case 4:  
                System.out.println("Thursday");  
                break;  
  
            case 5:  
                System.out.println("Friday");  
                break;  
  
            case 6:  
                System.out.println("Saturday");  
                break;  
  
            case 7:  
                System.out.println("Sunday");  
                break;  
  
            default:  
                System.out.println("Invalid day number");  
                break;  
        }  
    }  
}
```

```
    }  
  }  
}
```

4. Identify the Values of Uninitialized Variables

```
public class DataTypes{  
    public static void main(String[] args){  
  
        byte a = 110;  
        System.out.println(a);  
  
        short b = 320;  
        System.out.println(b);  
  
        int c = 10000;  
        System.out.println(c);  
  
        long d = 264786;  
        System.out.println(d);  
  
        float e = 1.26f;  
        System.out.println(e);  
  
        double f = 1.465257654d;  
        System.out.println(f);  
  
        char g = 'p';  
        System.out.println(g);  
  
        Boolean h = true;  
        System.out.println(h);  
    }  
}
```
